State College, PA 16801

Dear Cindy:

As I mentioned to you on February 15, 1985, the results of the residue analysis on fish collected from the Allegheny River below the Lindane Dump on May 3, 1984 were reviewed by our toxicologist, Bruce Moholt. Bruce indicated that all results appear to be background levels of pesticides with the possible exception of PCB at 1.6 ppm in sample 84-1158. However, you said that the PCB results may not be reliable. The samples analyzed do not appear affected by the Lindane Dump.

Please forward to me, a copy of your final report regarding fish analysis at the Lindane Dump. I'll keep you informed of any further actions at Lindane Dump. Thank you for your help.

Sincerely,

Gregg Crystall  
CERCLA Remedial Enforcement Section
